Title : TS: Microsoft System Center
Operations Manager 2007,
Configuring

Vendors : Microsoft

Version : DEMO

NO.1 You have a System Center Operations Manager 2007 environment. Your company hosts multiple Web sites for other companies. You provide dedicated Web servers for each company. You allocate a specific range of IP addresses for each companys group of Web servers. All Web sites are hosted on Microsoft Windows Server 2003 computers that are running Internet Information Services (IIS) 6.0. You create a user role for each companys webmaster. You need to limit the Operations Manager console access of each companys webmaster to that companys servers. You need to maintain this limited access even when new servers are added.

What should you do?

- A.Create an Operations Manager group for each company. Populate the group with explicit members based on specific server names. For each company, add the new group to the user role for that company.
- B.Create an Operations Manager group for each company. Populate the group with dynamic members based on the IP address range. For each company, add the new group to the user role for that company.
- C.Create a single Operations Manager group. Populate the group with dynamic members based on the IP address ranges for all companies. For each company, add the new group to the user role for that company.
- D.Create an Operations Manager group for each company. Populate the group with explicit members based on each specific server IP address. For each company, add the new group to the user role for that company.

Answer: B

NO.2 You have a System Center Operations Manager 2007 environment. You need to list all the processes that are running on one of the Microsoft SQL Server computers. The collection should occur only when

the SQL Server state changes to unhealthy. You need to collect the information even if there is no

administrator present. What should you do?

A.Run the List Processes task.

B.Run a PowerShell script that will return all processes.

C.Create a diagnostic task for the affected SQL Server monitor. Use the tasklist.exe command and the default options.

D.Create a rule by using the Timed Commands template. Specify the tasklist.exe command, and use the default options.

Answer: C

NO.3 Your company deploys System Center Operations Manager 2007 agents as part of a computer image.

You join all computers in the company to the corporate Active Directory domain. You need to ensure that

agents automatically obtain settings from the corporate Active Directory domain at startup.

Which two

actions should you perform? (Each correct answer presents part of the solution. Choose two.)

A.Use the MOMADAdmin utility to publish Management Group information to the corporate Active

Directory domain.

B.Run the Discovery Wizard. Perform automatic computer discovery to scan Active Directory for installed agents.

C.Configure Auto Agent Assignment on the target Management Server to assign desired computers to the target Management Server.

D.Configure an Active Directory Group Policy object (GPO) to publish Management Group information to

computers in the corporate Active Directory domain.

Answer: AC

NO.4 You have a System Center Operations Manager 2007 environment. Your company has 10 Microsoft

SQL Server 2005 computers and 5 SQL Server 2000 computers. Currently, you do not

receive alerts for

long-running SQL S2005 agent jobs. You need to monitor the job duration of only the SQL 2005 agent

jobs. What should you do?

A.Create an override to enable the Discover SQL 2005 Agent jobs discovery For all objects of type: SQL

2005.Agent.

B.Create an override to enable the Discover SQL 2005 Agent jobs discovery For specific object of type:

SQL 2005 Agent.

C.Create an override to enable the Discover SQL 2005 Agent jobs discovery For all objects of type: SQL

2000.Computers.

D.Create an override to enable the Discover SQL 2005 Agent jobs discovery For specific object of type:

SQL 2000 Agent.

Answer: A

NO.5 You have a System Center Operations Manager 2007 environment. You configure notification

subscriptions to send e-mail alert notifications to separate Active Directory, Exchange Server, and SQL

Server support teams when errors occur. You need to reduce the number of characters that are displayed

in the e-mail notification for all alerts. What should you do?

A.In the Notification settings, modify the default notification format for instant messages.

B.In the Notification settings, enable Short Message Service (SMS) notifications.

C.In the Notification settings, modify the default notification format for e-mail messages.

D.In the notification subscription for the Active Directory support team, modify the default notification

format for e-mail messages.

Answer: C

NO.6 Your company has a System Center Operations Manager 2007 environment.

The company has four branch offices, which are connected by a wide area network (WAN).

The routers

that connect the branch offices to the main office experience occasional failures. You need to configure

Operations Manager 2007 to discover branch office routers and to monitor for device failure.

What

should you do?

A. Perform automatic discovery by using the Computer and Device Management Wizard to add the

branch office routers as monitored objects.

B. Perform advanced discovery by using the Computer and Device Management Wizard to add the

branch office routers as monitored objects.

C. Run the New-CustomMonitoringObject PowerShell commandlet on the Management Server. Use the

Set-ProxyAgent commandlet to set a proxy agent to remotely monitor branch office routers.

D. Run the New-Object PowerShell commandlet on the Management Server. Use the Set-ProxyAgent

commandlet to set a proxy agent to remotely monitor branch office routers.

Answer: B

NO.7 You install System Center Operations Manager 2007 parallel with your Microsoft Operations Manager

(MOM) 2005 monitoring environment. You convert a MOM 2005 management pack to a file named

Custom07.xml. You need to identify whether the Custom07.xml file is in the correct Operations Manager

2007 format. What should you do?

A. Import Custom07.xml into Operations Manager 2007.

B. Edit Custom07.xml to remove MOM 2005 references.

C. Run the MPVERIFY custom07.xml command on the Operations Manager 2007 server.

D. Run the MP CONVERT custom.mp custom07.xml command on the MOM 2005 server.

Answer: C

NO.8 Your company has two Active Directory domains. One domain is located in the trusted network. The

other domain is located in the perimeter network. No trust relationship exists between the two domains.

You deploy System Center Operations Manager 2007 in the Active Directory domain on the trusted

network. You manually install the agent on an application server that resides in the Active Directory

domain in the perimeter network. The agent does not appear in the Operations Console. An error event

indicates that the agent is unable to obtain configuration information from the Management Server. You

need to configure Operations Manager 2007 to monitor the agent. What should you do?

- A. Disable mutual authentication in the Operations Console.
- B. Perform a push installation of the agent to the target server.
- C. Configure the agent on the application server to use certificate-based authentication.
- D. On the Management Server, configure Auto Agent Assignment settings. Use the MOMADAdmin utility

to publish Management Group information to the Active Directory domain in the perimeter network.

Answer: C

NO.9 You have a System Center Operations Manager 2007 environment. You create a custom management

pack that monitors server temperature. You need to automatically shutdown a server if it exceeds a

specific temperature. What should you do?

- A. Modify the monitor properties for the server temperature to create a threshold override For all objects of type: temperature.
- B. Modify the monitor properties for the server temperature to create a recovery task that runs the shutdown.exe /s command.
- C. Create an event alert that monitors server temperature. Create an agent task that runs the shutdown.exe /s command.
- D. Create an event alert that monitors server temperature. Create a console task that runs the shutdown.exe /s command.

Answer: B

NO.10 You deploy System Center Operations Manager 2007 at your company. The company has three

Microsoft Exchange Server 2003 computers. You need to ensure that the Exchange administrators are

able only to override the configuration of rules and monitors. What should you do?

- A. Create a user role that is based on the Author profile. Add the Exchange administrators to this new role.

B. Create a user role that is based on the Advanced Operator profile. Add the Exchange administrators to this new role.

C. Add the Exchange administrators to the Operations Manager Operators user role.

D. Add the Exchange administrators to the Operations Manager Administrators user role.

Answer: B

NO.11 You deploy System Center Operations Manager 2007 in your company's Active Directory domain. You manually install an Operations Manager agent on an application server named Server1. Server1 is a member of the Active Directory domain. The agent does not appear in the Pending Management view in the Operations Console. An error message in the Operations Manager Event log on Server1 indicates that the agent is unable to obtain configuration information from the Management Server. You need to ensure that the agent appears in the Pending Management view in the Operations Console. What should you do?

A. Select the Review new manual agent installations in pending management view option.

B. Configure the agent on Server1 to use certificate-based authentication.

C. Add the Management Server action account to the local Administrators group on Server1. Restart the Health Service on Server1.

D. Disable mutual authentication in the Operations Console. Restart the Health Service on Server1.

Answer: A

NO.12 You have a System Center Operations Manager 2007 environment. You download the Office SharePoint Server 2007 Management Pack for Operations Manager 2007. You notice that it is a Microsoft Operations Manager (MOM) 2005 converted management pack. A prerequisite management pack is required. You need to be able to monitor the Microsoft Office SharePoint Server 2007 servers. What should you do?

- A.Import the MOM 2005 SharePoint 2003 Management Pack.
- B.Import the Microsoft Windows SharePoint Services 2003 Management Pack.
- C.Import the Microsoft Windows Server Operating System Management Pack.
- D.Import the Operations Manager 2007 MOM 2005 Backward Compatibility Management Pack.

Answer: D

NO.13 You have a System Center Operations Manager 2007 environment. You are creating a Windows Performance Counters monitor for % Processor Time. You need to be able to select the All instances option when you create this monitor. What should you do?

- A.Create an aggregated rollup monitor.
- B.Create a dependency rollup monitor.
- C.Create a static threshold monitor.
- D.Create a self-tuning threshold monitor.

Answer: C

NO.14 You install System Center Operations Manager 2007 on all your companys servers. You configure Operations Manager 2007 to monitor the health status of all applications. The technical support team reports that they are not receiving e-mail notification when an application fails. You need to ensure that the technical support team receives e-mail notification when an application fails. What should you do?

- A.Create a new user role that is based on the Advanced Operator profile. Filter a notification subscription to this new role.
- B.Create a new user role that is based on the Operator profile. Filter a notification subscription to this new role.
- C.Enable e-mail notification. Create a new notification subscription based on Alert Aging.
- D.Enable e-mail notification. Create a new notification recipient, and then create a new notification subscription.

Answer: D

NO.15 You have a System Center Operations Manager 2007 environment. You need to schedule a regular

export of your unsealed management packs. What should you do?

- A.Create a scheduled task that uses the momcertimport.exe tool.
- B.Create a scheduled task that uses the get-managementpack PowerShell commandlet.
- C.Create a scheduled task that uses the mpexport.exe tool.
- D.Create a scheduled task that uses the mpseal.exe tool.

Answer: B
