Title : Developing Mobile Apps

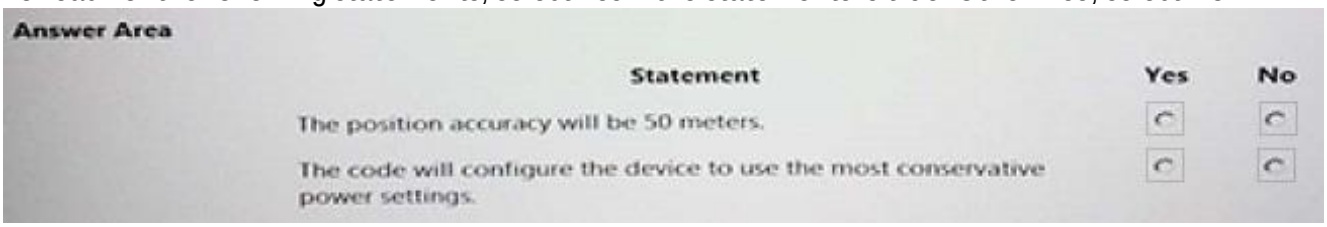
Vendor : Microsoft

Version : DEMO

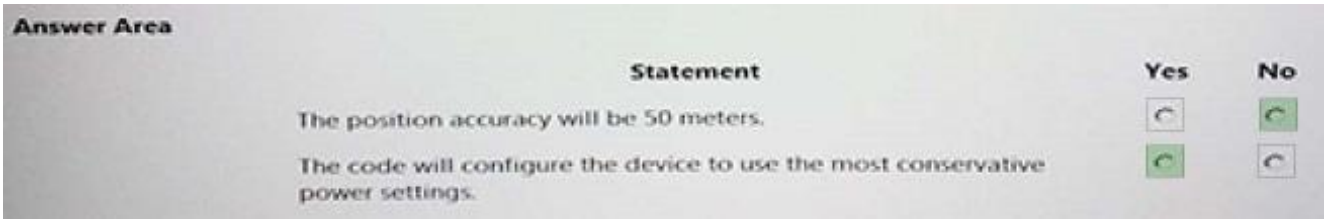
NO.1 Hotspot Question
You are developing an app that displays photos.
You need to create a method that displays informational text when a user hovers the pointer over a photo.
How should you complete the method? To answer, select the appropriate code segment from each list in the answer area.

```
private void GeoMode()
{
  Geolocator geo = new Geolocator();
  geo.DesiredAccuracy = Windows.Devices.Geolocation.PositionAccuracy .High;
}
```

You have an app that includes the following method:
For each of the following statements, select Yes if the statements is true. Otherwise, select No.



Answer:



NO.2 You have a Universal Windows Platform (UWPJ app.
The app has a page that includes the following XAML markup. Line numbers are included for reference only.

```
01 <DataTemplate >
02     <Border Background="Blue" Width ="400" Height="300" Margin ="20">
03     <Grid>
04       <Grid.ColumnDefinitions >
05         <ColumnDefinition Width ="*"/>
06         <ColumnDefinition Width ="*"/>
07       </Grid.ColumnDefinitions >
08       <Rectangle Grid.Column ="1" Fill="White" Opacity =".66"/>
09       <TextBlock Text ="{Binding LastName }"/>
10     </Grid>
11     </Border>
12 </DataTemplate >
```

Users report that the page takes a long time to refresh.
You need to improve the load time for the page while maintaining the same layout and functionality.
What should you do?

A. Swap the markup at line 012 with the markup at line 03. Swap the markup at line 10 with the markup at line 11.

B. Move the attributes from the BORDER element at line 02 to the GRID element at line 03.

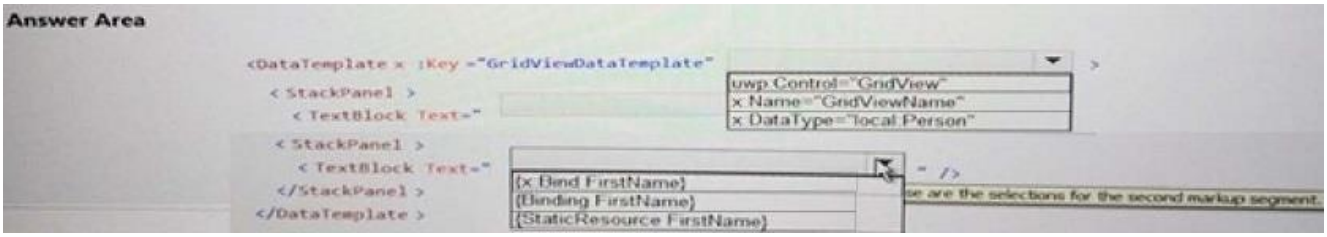
Then, remove the BORDER elements at line 02 and line 11.

C. Move the Fill and Opacity attributes and value from the RFCTANGLE dement at line 08 to the GRID element at line 03.
Then. Remove the RECTANGLE element at line 08 to the GRID.
Then, Remove the RECTANGLE element.

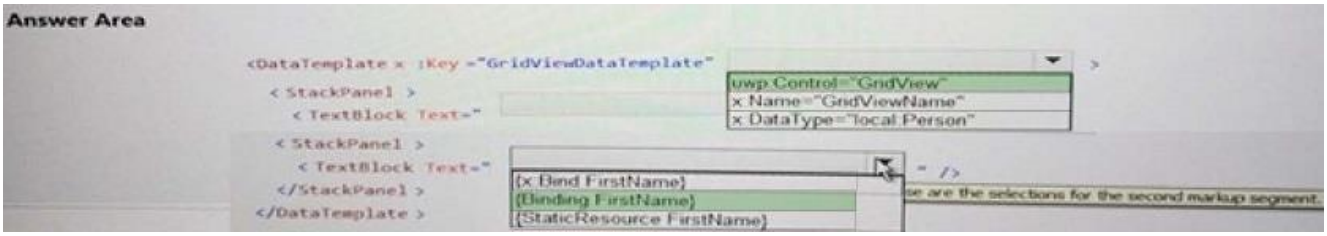
D. Specify exact values for the Width property in lines 05 and 06.

Answer: C

NO.3 Hotspot Question
You are developing a Universal Windows Platform (UWP} app that processes and displays data from your company's personnel database.
Users report that one of the views in the UWP app loads slowly.
You need to optimize the load time.
How should you complete the relevant markup? To answer, select the appropriate markup segment from each list in the answer area.

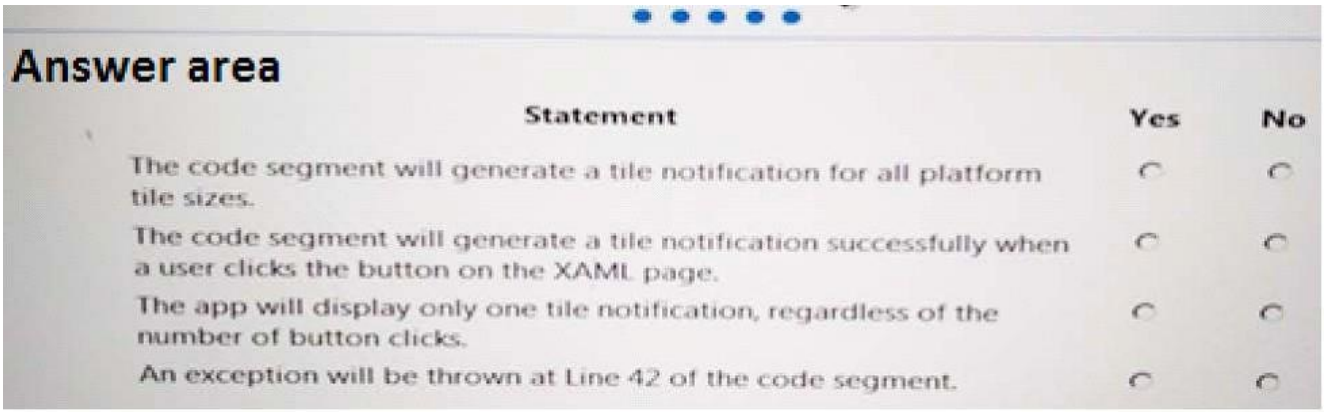


Answer:

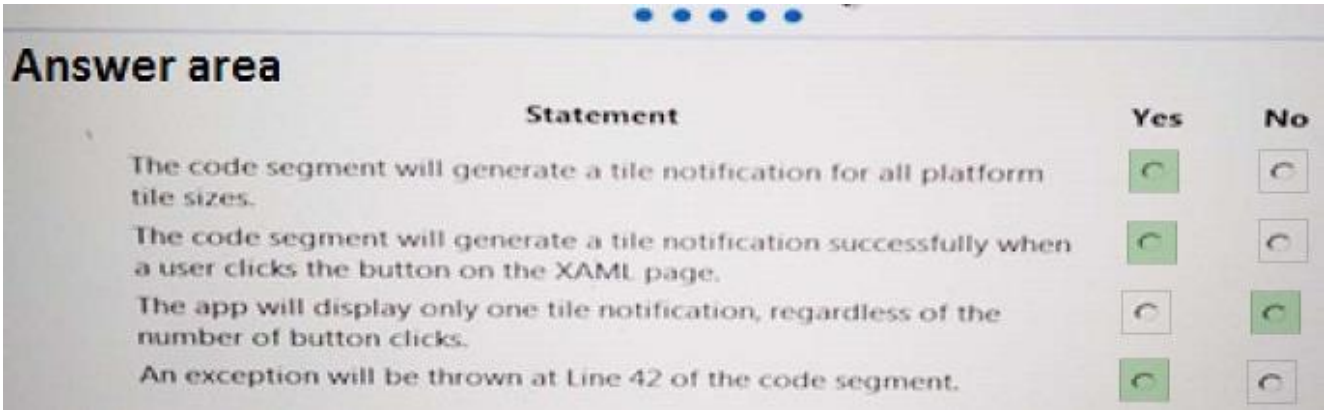


NO.4 Hotspot Question
You are developing a Universal Windows Platform (UWP) app by using XAML and C#.
A team member has written a XAML page includes a button with an event handler method named ButtonSendNotification_Click() registered to the Click event.
You are reviewing the following code segment written by the team member (line numbers are added for reference only):

```
01 public sealed partial class MainPage : Page
02 {
03   public MainPage()
04   {
05     InitializeComponent();
06     TileUpdateManager .CreateTileUpdaterForApplication().EnableNotificationQueue( true);
07   }
08   private void ButtonSendNotification_Click( object sender, RoutedEventArgs e)
09   {
10     SendTileNotification();
11   }
12   private static string GetNewsTitle()
13   {
14     ...
15   }
16   private void SendTileNotification()
17   {
18     TileNotification tileNotification = GenerateTileNotification();
19     tileNotification.Tag = "newsItem" + GetNewsTitle();
20     TileUpdateManager .CreateTileUpdaterForApplication().Update(tileNotification);
21   }
22   private TileNotification GenerateTileNotification()
23   {
24     string xml = $@"
25       <tile version='3'>
26         <visual branding='name'>
27           <binding template='TileMedium'>
28             <text hint-wrap='true'>This just in...</text>
29             <text hint-wrap='true' hint-style='captionSubtle'/>
30           </binding>
31           <binding template='TileWide'>
32             <text hint-wrap='true'>This just in...</text>
33             <text hint-wrap='true' hint-style='captionSubtle'/>
34           </binding>
35           <binding template='TileLarge'>
36             <text hint-wrap='true'>This just in...</text>
37             <text hint-wrap='true' hint-style='captionSubtle'/>
38           </binding>
39         </visual>
40       </tile>" ;
41     XmlDocument doc = new XmlDocument ();
42     doc.LoadXml(xml);
43     string nowTimeString = DateTime.Now.ToString();
44     foreach ( XmlElement textEl in doc.SelectNodes("//text" ).OfType< XmlElement>())
45       if (textEl.InnerText.Length == 0)
46         textEl.InnerText = "(" + nowTimeString + ") Top News: " + GetNewsTitle();
47     TileNotification tileNotification = new TileNotification (doc);
48     return tileNotification;
49   }
50 }
```



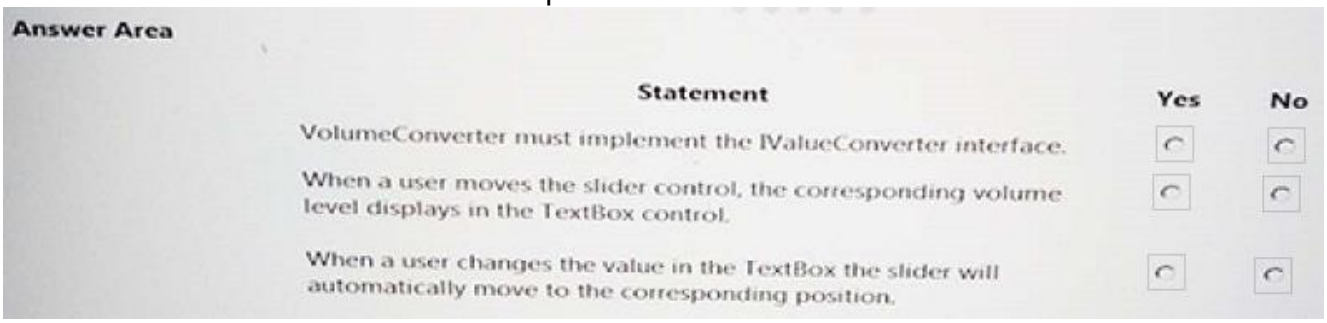
Answer:



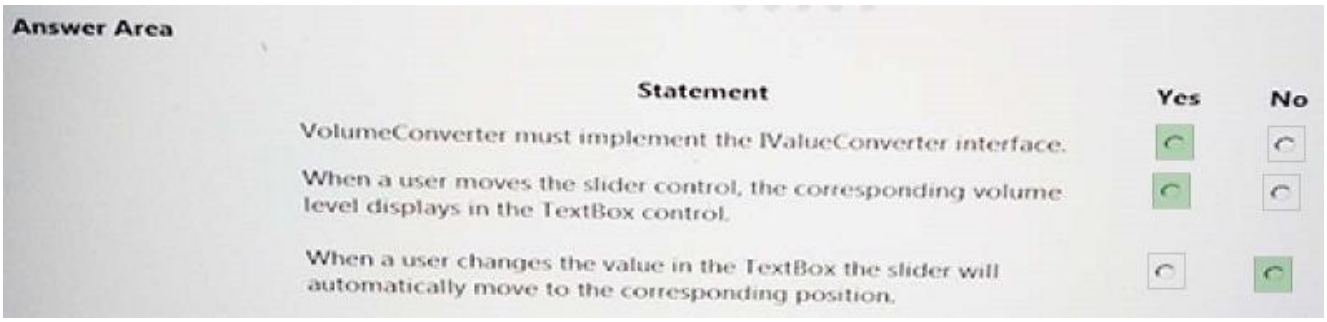
NO.5 Hotspot Question
You are developing a Universal Windows Platform (UWP) app that plays audio recordings.
You are creating a page where the user can set a volume level for the app using a slider control.
You need to display the volume level in TextBox right below the slider.
You have C# class named VolumeConverter that converts slider values to a number.
You have a page that includes the following markup:

```
<Page ...>
  <Page.Resources >
    <local : S2Formatter x : Key="VolumeConverter"/>
  </ Page.Resources >
  < Slider x: Name ="VolumeSlider"/>
  < TextBox Text="{ Binding Path=Value, ElementName =VolumeSlider, Mode =OneWay, Converter={ StaticResource
VolumeConverter}}"/>
 </Page >
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
Note: Each correct selection is worth one point.



Answer:



Answer Area
Statement
Yes
No
VolumeConverter must implement the IValueConverter interface.
When a user moves the slider control, the corresponding volume level displays in the TextBox control.
When a user changes the value in the TextBox the slider will automatically move to the corresponding position.
